silence_fraction
0.4
0.5
0.6
0.7
0.8
0.9
1.0
AUC of the covariate for the two-way label
(orientation-free; 0.5 = none)
B
Recording variables alone predict the label
on unseen bats
context only
all recording
variables
channel only
SNR + noise floor
+ clipping
silence / length
variables
0.4
0.5
0.6
0.7
0.8
0.9
1.0
held-out-bat AUC predicting the label
from these variables only
draft pipeline (whole span, FCM labels)
voiced frames only (forced k-means split)
